# DeMeter API: Search Alerts

Lets you retrieve and filter alerts using flexible parameters for diagnostics, reporting, and monitoring. You can quickly identify critical issues, track maintenance trends, and generate targeted reports—making your alert management more proactive and data-driven.

This feature comes in addition to DeMeter's built-in alerting system:
- Email notification
- Smartphone application

## How to Use It

Make sure the Smart Notifications add-on is enabled in your configuration.

### Endpoint

`GET /api/Alert/search`

### Filter Alerts Using Parameters Like:
- `startTime`, `endTime`
- `status` (OPEN, CLOSED, ACCEPTED)
- `levels` (Critical, Error, Warning, Info)
- `device`, `category`, `maxSize`

## Typical Use Cases Include:
- Daily maintenance reviews
- Device-specific alert tracking
- Identifying unresolved critical issues
